A – Addendum #2

RFP – E20803 Function Junction Water Metering

Response to questions.

1.

- In the proposal format detailed in the RFP, there doesn't appear to be a section for proponents to provide product and AMI software information. Can you please provide instructions for this?

Please provide a summary within the proposed work plan. Detailed product information should be provided in an appendix (this does not count towards page count).

2.

- For the meter related work, there is meter change outs and also new meter cut-in requirements. The sizes are small, intermediate, and large sizes. Are certified plumbers required to undertake a portion or all of this meter related work?

The RMOW will not require that a certified plumber installs meters. However, the RMOW will add the requirement that proponents have at least one certified plumber on their team (or on a subcontractor's team) as a part of quality assurance.
