Attention: Andrew Tucker

Dear Mr. Tucker:

Subject: Summary of 2023 VOC Sampling Program, Cheakamus Crossing Neighborhood

WSP Canada Inc. (WSP) is pleased to provide the VOC Results for the Resort Municipality of Whistler for 2023. The report outlines the VOC monitoring program conducted during 2023 and compares the data to ambient air quality criteria.

Yours sincerely,

Braden Bartnik, B.Sc., CPESC
Air Quality Specialist, Environment

A	LABORATORY RESULTS
---	--------------------

1 INTRODUCTION

As part of the RMOW Air Quality Program, WSP collects samples of ambient air with SUMMA cannisters (negatively pressured cannisters supplied by ALS labs) and determines concentrations of Volatile Organic Compounds (VOCs) in the ambient air through third-party laboratory analysis. The purpose of this analysis is to determine if nearby asphalt manufacturing operations were impacting the air quality in the Cheakamus Crossing neighbourhood.

This report summarizes data collected from the VOC sampling in 2023.

2 VOC SAMPLING

2.1 METHODS

To capture the potential impact of the asphalt plant air emissions, the VOC sampling is conducted at select locations in the Cheakamus Crossing neighbourhood on days when the asphalt plant is in operation and wind conditions are forecasted to put the community downwind from the plant. Figure 1 shows the locations for the VOC sampling points, Beta Attenuation Monitor (BAM) and asphalt plant. The BAM is a precise air quality monitor which measures concentrations of fine particulate matter (PM2.5) in the ambient air at the High-Performance Center (HPC). There are four VOC sampling locations which were each selected in consideration of air sampling best practices related to accessibility, security, shadowing by structures, proximity to the potential source and providing a range of locations in the community. As the fenceline location was the closest to the potential source it was always sampled as it had the highest chance of measuring any elevated VOC levels. Locations farther out in Cheakamus Crossing were not chosen in this study as VOCs disperse as they travel, so the most likely locations to detect them are near to the source. If VOCs were detected at high levels at any of the sampling locations, additional monitoring at other locations across the community could be considered.

VOC samples were collected for the following locations and days in 2023.

Table 1 Sampling Locations and Times for VOC tests.

Date Sampled	Location	Sampling Start Time	Sampling End Time	Time Elapsed
14-Jun-2023	Mt. Fee	9:49 AM	12:50 PM	3:01
14-Jun-2023	Fenceline	9:59 AM	1:59 PM	4:00

Base image retrieved from Bing Maps on May 05, 2023.

Figure 1 Map with locations for VOC sampling (blue), BAM monitor at HPC (green), PurpleAir monitors (purple) and asphalt plant (red).

SUMMA cannisters were deployed at the locations stated above for approximately four hours, and cannister pressures were checked and recorded every hour for quality control. SUMMA cannisters are stainless steel cannisters, designed for collecting air samples. They are supplied by ALS labs, negatively pressured and calibrated to draw air at a flow rate determined by the regulator over a sampling period. After deployment, the cannisters were then sent to ALS labs to be analyzed for common VOC concentrations. Figure 2 shows a SUMMA cannister and how it was deployed.

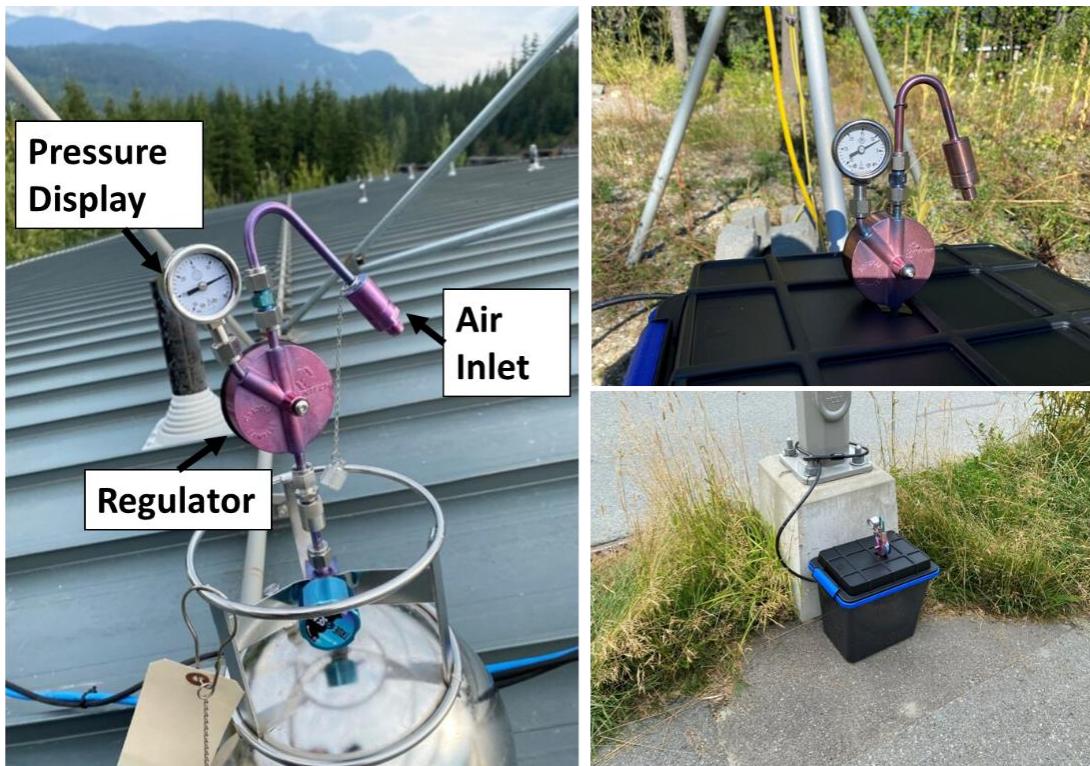

Figure 2 SUMMA cannister, enclosed by a box during deployment.

DATA PROCESSING

The laboratory analyzed the samples for 60 different VOC species and produced a report with concentrations in parts per billion volume (ppbv). This report summarizes VOC concentrations detected by the tests and compares them to Ambient Air Quality Criteria (AQCC) as an indicator of potential impacts.

Wind roses were plotted using the data collected at the HPC building for the period in which the samples were being collected. Wind data was also reviewed from a nearby station to understand regional wind variation.

2.2 RESULTS

Table 2 outlines the production of the asphalt plant just before or during the four VOC sampling days. Since the plant operates intermittently, it was essential to make sure that it was running to detect any VOCs associated with its activity. During 2023, the plant operated for 64 days.

Table 2 Asphalt Plant Activities During VOC Collection Dates

Date	Start Time	End Time	Time Elapsed	Production of asphalt (tonnes)
14-Jun-23	7:30 AM	11:00 AM	3:30	412
	12:30 PM	1:30 PM	1:00

03-Oct-23	7:30 AM	9:00 AM	1:30	257
	10:30 AM	11:30 AM	1:00	
	12:30 PM	1:30 PM	1:00	

Figure 3 displays the wind roses for the periods when the VOCs were being sampled. Wind roses show the general wind direction during the sampling period. The cardinal points on wind rose show the direction the winds blew from and the length of each "spoke" around the circle shows how often the wind blew from that direction. The colors of each "spoke" represent the wind speed.

The wind speed and wind direction data were collected at the HPC building. The intention of the selected sampling times was to have forecasted winds that put the asphalt plant in an up-wind direction to the community and sampling points. A general wind direction that puts the asphalt plant upwind is southwest, however the sampling locations were selected to provide a range of points where wind from southwest to northwest may carry asphalt emissions towards the sampling locations. Despite forecasted winds from these directions, the monitored winds during the sampling events vary, but all show a westerly component that had the potential of dispersing asphalt plant emissions towards the community during the sampling events.

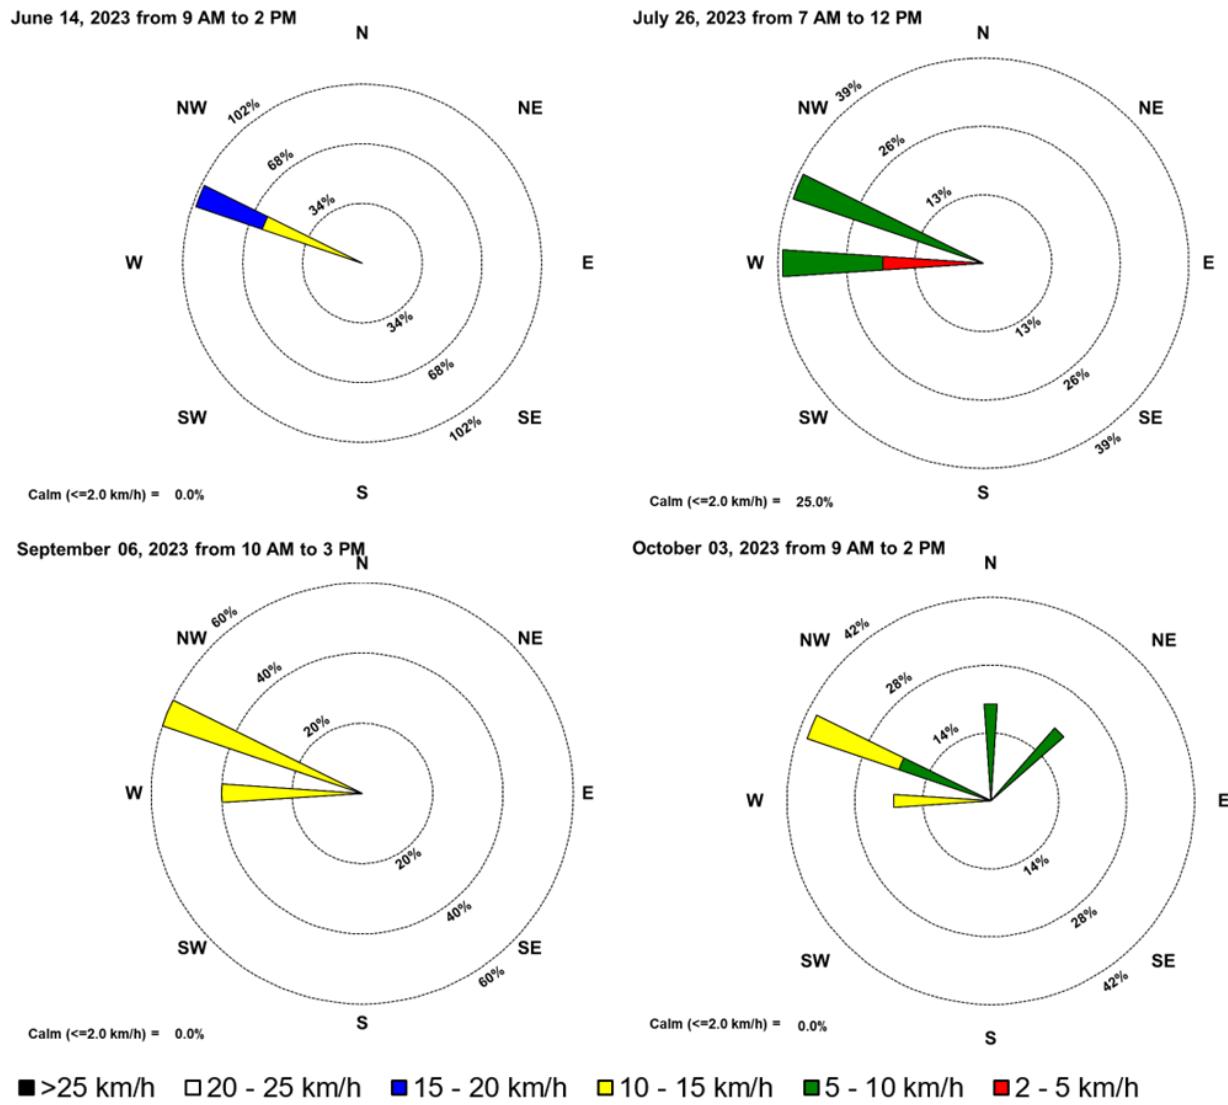

Figure 3 **Wind roses during VOC sampling periods**

Results from the VOC sampling (Table 3) are compared with 24-hour Ambient Air Quality Criteria (AAQCs) from Ontario (MECP 2020) (BC does not have objectives / criteria for individual VOCs) as an indicator of the potential for impacts in the neighbourhood. Only eight of sixty analyzed were detected. All detected VOC concentrations were below the AAQCs in 2023.

Figure 4 represents the percentage of the AAQCs reached by each detected VOC for every location and sampling day. Figure 5 shows a comparison for the maximum value reached (in terms of percentage of the AAQCs) for each detected VOC in 2022 and 2023. These figures show that carbon tetrachloride was the VOC with the highest measured concentrations as compared to the AAQC. The primary pollutants of concern from asphalts and asphalt paving operations are volatile organic compounds (VOC) (ref: AP-42 Vol. 1 Ch 4.5). Carbon tetrachloride, Dichloroethane, Chloromethane, and other VOC species can be used as a solvent in the asphalt production process and Benzene is known to be present in the production of asphalt. These may be a marker of asphalt emissions in the sampling. It should be confirmed with the asphalt plant whether this is a substance used in their asphalt formulation. It is also worth noting that the data shows remarkable consistency in the concentrations of carbon tetrachloride, at approximately 20% of its AAQC in 2022 and 2023, across all sampling locations. In order to determine if the asphalt plant is the source of the carbon tetrachloride, sampling events on non-production days or in non-production seasons could be carried out.

Table 3 VOCs that were detected in the analysis. Concentrations in ppbv.

VOC	DL ¹	AAQC (24-hour averaging period)	14-Jun-23		26-Jul-23		06-Sep-23		03-Oct-23		Maximum value	Maximum percentage of the AAQC

[1] Detection Limit: minimum concentration, in ppbv, that can be detected by the analysis instrument.

[2] Values in bold mean that the substance was above the detection limit. All values for 2023 are below the AAQC.

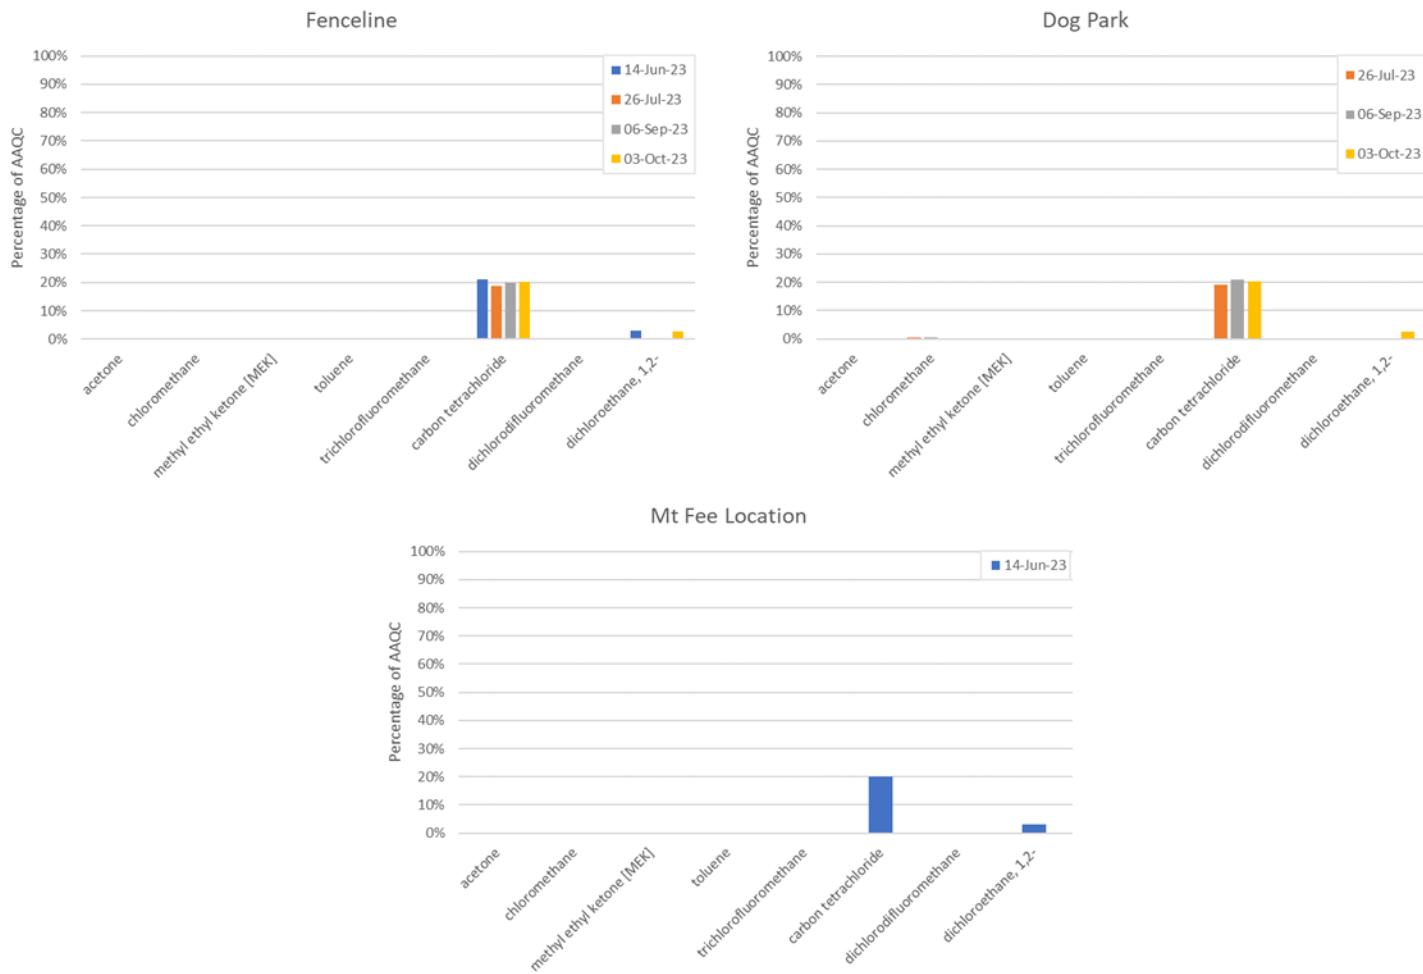

Figure 4

Detected VOCs for each sampling location and sampling date. VOCs are displayed as a percentage of their Ambient Air Quality Objective (AAQO)

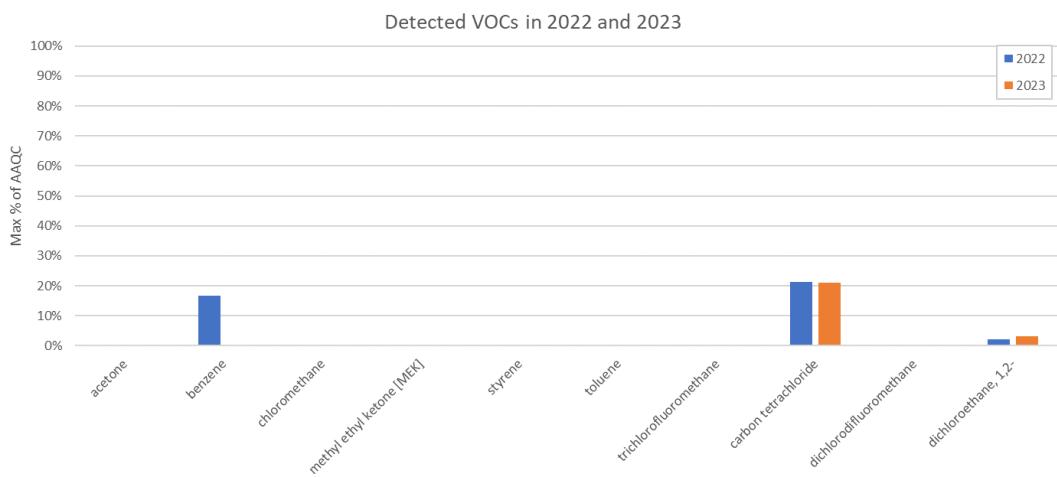

Figure 5 Maximum concentrations of VOCs detected in 2022 and 2023, displayed as a percentage of their corresponding Ambient Air Quality Objective (AAQO)

3 CONCLUSION

As part of the RMOW Air Quality Program in 2023, WSP collected samples of ambient air with SUMMA cannisters and determined concentrations of Volatile Organic Compounds (VOCs) in the ambient air through third-party laboratory analysis. The purpose of this analysis was to determine if nearby asphalt manufacturing operations were impacting the air quality in the Cheakamus Crossing neighbourhood.

VOC measurements taken during the year of 2023 were all below AAQC and similar to results from the VOC sampling conducted in 2022. Concentrations of carbon tetrachloride, up to 21.1% of its corresponding AAQC have been measured during sampling events in 2022 and 2023. Carbon tetrachloride can be used as a solvent in the asphalt production process. This may be a marker of asphalt emissions in the sampling. It should be confirmed with the asphalt plant whether this is a substance used in their asphalt formulation, or, to determine if the asphalt plant is the source of the carbon tetrachloride, sampling events on non-production days or in non-production seasons could be carried out.

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

<i>Unit</i>	<i>Description</i>
-	no units
µg/m ³	micrograms per cubic metre
Inches Hg	inches of mercury
ppbv	parts per billion (volume/volume)

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

No. of samples analysed	: 2		

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Legend & Qualifier Definitions

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Air

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Method	QC Lot #	Count		Frequency (%)		
			QC	Regular	Actual	Expected	Evaluation

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
TVOC (VHv) in Canisters or Bags by GC-MS ($\mu\text{g}/\text{m}^3$)	E593B Waterloo - Environmental	Air	EPA TO-15 (mod)	Total Volatile Organic Compounds (TVOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS (ppbV)	E621B Waterloo - Environmental	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS (ppbV)	E621B-L Waterloo - Environmental	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (WT Misc. List) in Air by Canister or Bag by GC-MS (ppbV)	E621C Waterloo - Environmental	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VPH in Canisters or Bags GC-MS ($\mu\text{g}/\text{m}^3$)	EC592B Waterloo - Environmental	Air	BC MOE Lab Manual (Calculation of VPH)	Volatile Petroleum Hydrocarbons (VPH) is calculated as follows: $VPH_v = \text{Volatile Hydrocarbons (VH6-13)} - \text{benzene, toluene, ethylbenzene, xylenes, styrene, n-hexane, and n-decane}$.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621B Waterloo - Environmental	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621B-L Waterloo - Environmental	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
VOCs (WT Misc. List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621C Waterloo - Environmental	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
Air Canister Information	EF001 Waterloo - Environmental	Air	In-house	Air canister information provided by client and recorded on ALS report may affect the validity of results.

Project : CA-WSP-171-03296-05

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

= Indicates a QC result that did not meet the ALS DQO.

Workorder Comments

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Air

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Air

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	Position	Laboratory Department
David Tremblett	VOC Section Supervisor	Air Quality, Waterloo, Ontario

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
µg/m ³	micrograms per cubic metre
Inches Hg	inches of mercury
ppbv	parts per billion (volume/volume)

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Accreditation

Accreditation	Description	Laboratory	Address
A	CALA ISO/IEC 17025:2017	WT ALS Environmental - Waterloo	60 Northland Road, Unit 1, Waterloo, ON

Applicable accreditations are indicated in the Method/Lab column as superscripts.

No. of samples received	: 2		
No. of samples analysed	: 2		

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and/or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Legend & Qualifier Definitions

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Air

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
TVOC (VHv) in Canisters or Bags by GC-MS ($\mu\text{g}/\text{m}^3$)	E593B ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Total Volatile Organic Compounds (TVOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS (ppbV)	E621B ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS (ppbV)	E621B-L ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (WT Misc. List) in Air by Canister or Bag by GC-MS (ppbV)	E621C ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VPH in Canisters or Bags GC-MS ($\mu\text{g}/\text{m}^3$)	EC592B ALS Environmental - Waterloo	Air	BC MOE Lab Manual (Calculation of VPH)	Volatile Petroleum Hydrocarbons (VPH) is calculated as follows: $VPH_v = \text{Volatile Hydrocarbons (VH6-13)} - \text{benzene, toluene, ethylbenzene, xylenes, styrene, n-hexane, and n-decane}$.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621B ALS Environmental - Waterloo	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621B-L ALS Environmental - Waterloo	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
VOCs (WT Misc. List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621C ALS Environmental - Waterloo	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
Air Canister Information	EF001 ALS Environmental - Waterloo	Air	In-house	Air canister information provided by client and recorded on ALS report may affect the validity of results.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percent Difference (RPD) and Data Quality Objectives
- Method Blank (MB) Report; Recovery and Data Quality Objectives
- Laboratory Control Sample (LCS) Report; Recovery and Data Quality Objectives

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

= Indicates a QC result that did not meet the ALS DQO.

Workorder Comments

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Air

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Air

Quote number	: 2023 Price List BC WSP/Golder		
No. of samples received	: 2		
No. of samples analysed	: 2		

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	Position	Laboratory Department
David Tremblett	VOC Section Supervisor	Air Quality, Waterloo, Ontario

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances
LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
µg/m ³	micrograms per cubic metre
Inches Hg	inches of mercury
ppbv	parts per billion (volume/volume)

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Accreditation

Accreditation	Description	Laboratory	Address
A	CALA ISO/IEC 17025:2017	WT ALS Environmental - Waterloo	60 Northland Road, Unit 1, Waterloo, ON

Applicable accreditations are indicated in the Method/Lab column as superscripts.

No. of samples received	: 2		
No. of samples analysed	: 2		

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and/or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Legend & Qualifier Definitions

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Air

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Method	QC Lot #	Count		Frequency (%)

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
TVOC (VHv) in Canisters or Bags by GC-MS ($\mu\text{g}/\text{m}^3$)	E593B ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Total Volatile Organic Compounds (TVOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS (ppbV)	E621B ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS (ppbV)	E621B-L ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (WT Misc. List) in Air by Canister or Bag by GC-MS (ppbV)	E621C ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VPH in Canisters or Bags GC-MS ($\mu\text{g}/\text{m}^3$)	EC592B ALS Environmental - Waterloo	Air	BC MOE Lab Manual (Calculation of VPH)	Volatile Petroleum Hydrocarbons (VPH) is calculated as follows: $VPH_v = \text{Volatile Hydrocarbons (VH6-13)} - \text{benzene, toluene, ethylbenzene, xylenes, styrene, n-hexane, and n-decane}$.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621B ALS Environmental - Waterloo	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

= Indicates a QC result that did not meet the ALS DQO.

Workorder Comments

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Air

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Air

Notes

1. Quote number must be provided to ensure proper pricing

2. TAT may vary dependent on complexity of analysis and lab workload at time of submission. Please contact the lab to confirm TATs.

3. Any known or suspected hazards relating to a sample must be noted on the chain of custody in comments section. REV6-2015

AIR SAMPLING MEDIA REQUEST FORM

COMPLETE Blue sections. Grey sections are for INTERNAL USE ONLY

Form MUST be reviewed & initialed by an ALS Account Manager prior to submission to NAWTR AIRMEDIA REQUEST (nawtr.airmediarequest@alsglobal.com)

SHIPPING INFO: pls ship Purolator Express Friday 1Sept for delivery 5Sept latest.

CLIENT: WSP Golder
CLIENT CONTACT: Braden Bartnik
CLIENT PROJECT: VOC full fuels
QUOTE #:
DELIVERY TO: WSP Golder, 840 Howe Street, Suite 1000, Vancouver, BC V6Z 2M1
TELEPHONE NUMBER: 604-601-6776
SHIP TO/ATTENTION OF: Braden Bartnik braden.bartnik@wsp.com

ORDER TAKEN BY: Aspringer
ORDER DATE: 30-Aug-23
AM REVIEWER: DSTASTNY
CLIENT EXPECT DATE: 6-Sep-23
ORDER FILLED BY: MP7
PEER REVIEWER: AO5
DATE COMPLETED: 9/1/2023

Shipping Method: o Ground (ALS will cover shipping cost)
(Select one) o Express (Client will be billed for shipping costs, please confirm with Account Manager)
 o External Courier
 o Pickup at ALS
 o Location:
 o ALS Drivers

Shipping Company: o FedEx
 o Purolator
 o DHL
 o UPS
 o Other
 o N/A

Tracking Number:

Completion of all Sections is Mandatory

1. What type of air is being sampled? **Check all appropriate types in the Additional Information Box below**
2. Please provide a list of compounds and reporting limits that are required. **Include regulation & target list (attach to email)**
3. What is your planned canister sampling time? **Options listed under Regulator Times**
4. Trip blanks will be shipped pre-filled unless specifically requested below.

Note: If analysis required is DIFFERENT than what is LISTED on this form, email nawtr.airmediarequest@alsglobal.com ASAP to confirm the media was adequately proofed.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	Position	Laboratory Department
David Tremblett	VOC Section Supervisor	Air Quality, Waterloo, Ontario

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances

LOR: Limit of Reporting (detection limit).

<i>Unit</i>	<i>Description</i>
-	no units
µg/m ³	micrograms per cubic metre
Inches Hg	inches of mercury
ppbv	parts per billion (volume/volume)

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

QUALITY CONTROL INTERPRETIVE REPORT

Work Order	: VA23C3578	Page	: 1 of 6
Client	: WSP Canada Inc.	Laboratory	: ALS Environmental - Vancouver
Contact	: Braden Bartnik	Account Manager	: Amber Springer
Address	: 840 Howe St., Suite 1000 Vancouver BC Canada V6Z 2M1	Address	: 8081 Lougheed Highway Burnaby, British Columbia Canada V5A 1W9
Telephone	: ----	Telephone	: +1 604 253 4188
Project	: CA-WSP-171-03296-05	Date Samples Received	: 03-Oct-2023 16:50
PO	: ----	Issue Date	: 16-Oct-2023 10:31
C-O-C number	: ----		
Sampler	: ----		
Site	: ----		
Quote number	: 2023 Price List BC WSP/Golder		
No. of samples received	: 2		
No. of samples analysed	: 2		

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and/or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Legend & Qualifier Definitions

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Air

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Method	QC Lot #	Count		Frequency (%)		
			QC	Regular	Actual	Expected	Evaluation
Laboratory Duplicates (DUP)

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
TVOC (VHv) in Canisters or Bags by GC-MS ($\mu\text{g}/\text{m}^3$)	E593B ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Total Volatile Organic Compounds (TVOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS (ppbV)	E621B ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS (ppbV)	E621B-L ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VOCs (WT Misc. List) in Air by Canister or Bag by GC-MS (ppbV)	E621C ALS Environmental - Waterloo	Air	EPA TO-15 (mod)	Volatile Organic Compounds (VOC) in canisters (or bags) are transferred to a preconcentrator system and then thermally desorbed prior to injection into a GC-MS system for analysis.
VPH in Canisters or Bags GC-MS ($\mu\text{g}/\text{m}^3$)	EC592B ALS Environmental - Waterloo	Air	BC MOE Lab Manual (Calculation of VPH)	Volatile Petroleum Hydrocarbons (VPH) is calculated as follows: $VPH_v = \text{Volatile Hydrocarbons (VH6-13)} - \text{benzene, toluene, ethylbenzene, xylenes, styrene, n-hexane, and n-decane}$.
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621B ALS Environmental - Waterloo	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621B-L ALS Environmental - Waterloo	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$
VOCs (WT Misc. List) in Air by Canister or Bag by GC-MS ($\mu\text{g}/\text{m}^3$)	EC621C ALS Environmental - Waterloo	Air	unit conversion	Convert ppbV to $\mu\text{g}/\text{m}^3$

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

= Indicates a QC result that did not meet the ALS DQO.

Workorder Comments

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Air

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Air

Analyte	CAS Number	Method	LOR	Unit	Concentration	Laboratory Control Sample (LCS) Report			
						Spike	Recovery (%)	Recovery Limits (%)	Qualifier

----------------------------------	--	-------------------	---	--

Completion of all Sections Is Mandatory

1. What type of air is being sampled? **Check all appropriate types in the Additional Information Box below**
2. Please provide a list of compounds and reporting limits that are required. **Include regulation & target list (attach to email)**
3. What is your planned canister sampling time? **Options listed under Regulator Times**
4. Trip blanks will be shipped pre-filled unless specifically requested below.

Note: If analysis required is DIFFERENT than what is LISTED on this form, email nawtr.airmediarequest@alsglobal.com ASAP to confirm the media was adequately proofed.
